

BIT 4107-Mobile Application Development

ENHANCED PROFESSIONAL STUDENT LOGBOOK

Student name: KELLY MAROA

Admission Number:BIT/2024/49929

School/Faculty: COMPUTING AND INFORMATICS

Programme:Blood_Donation_App

Academic Year: THREE

Semester:TWO

Lecturer: MR.MICHAEL NYORO

Phone Number:0725104634

WEEK 1: INTRODUCTION TO MOBILE APPLICATION DEVELOPMENT

TOOLSANDSOFTWAREUSED 1.Android
Studio

2.VS Code

3.Flutter SDK

4.Dart

5.Android Phone

PERSONAL REFLECTION

Installing the tools was challenging at first due to errors and configuration issues, but it improved my problemsolving skills. I gained practical experience in setting up development environments and became more confident in using modern software tools for app development.

WEEK 2: MOBILE DEVELOPMENT ENVIRONMENT

PERSONAL REFLECTION

I set up the mobile development environment by installing and configuring tools like Android Studio, Flutter SDK, and device emulators. This process helped me understand how different components work together, though I faced minor setup challenges that enhanced my troubleshooting and technical skills.

WEEK 3: USER INTERFACE DESIGN

login screen

plash screen

Personal reflection

I focused on user interface design for the blood donation app using Figma. I learned how to create and organize screens, design user-friendly layouts, and improve overall system usability. This improved my understanding of UI/UX principles and enhanced my design skills.

Week 4: Event handling and user interaction

Personal reflection

I learned about event handling and user interaction in the blood donation app. I implemented how users interact with the system through buttons, forms, and input fields. This improved my understanding of how applications respond to user actions and enhanced my programming skills.

Week 5: Data management

Personal reflection

I focused on data management in the Blood Donation App. I learned how to store, retrieve, and update donor and request information using local storage and databases. This improved my understanding of how data is handled efficiently and enhanced my skills in managing application data.

Week 6: Networking and APIs

```

11        "android_client_info": {
12          "package_name": "com.blood_donation.app"
13        }
14      },
15      "oauth_client": [],
16      "api_key": [
17        {
18          "current_key": "AIzaSyDVDy62fZd7rrAi_DwKwh7gyK9Nb91T9Wo"
19        }
20      ],
21      "services": {
22        "appinvite_service": {
23          "other_platform_oauth_client": []
24        }
25      }
26    }
27  ],
28   "configuration_version": "1"
29 }
```

A blood donation app requires networking to connect users with donors and hospitals, enable real-time updates, send requests, share location data, and store information on cloud servers for accessibility and communication.

Personal reflection

Learning about data storage and database integration helped me understand how mobile apps manage and persist user data efficiently. I now appreciate the importance of choosing the right database and ensuring secure, reliable data handling in application development.

Copilot

Personal reflection

This topic helped me understand how mobile apps handle user input through events and gestures and how to do validation. I learned to structure functionality using classes, making applications more organized, interactive, and easier to maintain while improving user experience.

PERSONAL REFLECTION

Through Week 9, I learned how to integrate device features like GPS and biometrics into my blood donation app. This improved my understanding of creating interactive, user-friendly solutions while considering permissions, privacy, and real-world application efficiency.

PERSONAL REFLECTION

In Week 10, I learned how to integrate all the different components of a mobile application into one complete system. I improved my understanding of testing, debugging, and enhancing user experience. This helped

me appreciate the importance of building a functional, reliable, and user-friendly application.
