

BIT 4107-Mobile Application Development

ENHANCED PROFESSIONAL STUDENT LOGBOOK

Student name: KELLY MAROA

Admission Number:BIT/2024/49929

School/Faculty: COMPUTING AND INFORMATICS

Programme:Blood_Donation_App

Academic Year: THREE

Semester:TWO

Lecturer: MR.MICHAEL NYORO

Phone Number:0725104634

WEEK 1: INTRODUCTION TO MOBILE APPLICATION DEVELOPMENT

The screenshot displays the Visual Studio Code interface. The top menu bar includes File, Edit, Selection, View, Go, Run, Terminal, and Help. The left sidebar shows the Explorer view with the 'Flutter' extension highlighted. The main editor area displays the 'Flutter' extension details, including the Flutter logo, version v3.42.0, and the Dart Code extension. The bottom panel shows the 'Problems' view with the 'Flutter' extension listed. The terminal window at the bottom shows the output of the 'flutter doctor' command, indicating that the Flutter environment is set up correctly, but the Android toolchain is missing and the Android license status is unknown.

TOOLS AND SOFTWARE USED

1.Android Studio

2.VS Code

3.Flutter SDK

4.Dart

5.Android Phone

PERSONAL REFLECTION

Installing the tools was challenging at first due to errors and configuration issues, but it improved my problem-solving skills. I gained practical experience in setting up development environments and became more confident in using modern software tools for app development.

WEEK 2: MOBILE DEVELOPMENT

ENVIRONMENT

PERSONAL REFLECTION

I set up the mobile development environment by installing and configuring tools like Android Studio, Flutter SDK, and device emulators. This process helped me understand how different components work together, though I faced minor setup challenges that enhanced my troubleshooting and technical skills.

WEEK 3: USER INTERFACE DESIGN

login screen

spash screen

Dashboard

Personal reflection

I focused on user interface design for the blood donation app using Figma. I learned how to create and organize screens, design user-friendly layouts, and improve overall system usability. This improved my understanding of UI/UX principles and enhanced my design skills.

Week 4: Event handling and user interaction

!#1 , English (UK) . Done

Personal reflection

I learned about event handling and user interaction in the blood donation app. I implemented how users interact with the system through buttons, forms, and input fields. This improved my understanding of how applications respond to user actions and enhanced my programming skills.

Week 5: Data management

Profile

Personal reflection

I focused on data management in the Blood Donation App. I learned how to store, retrieve, and update donor and request information using local storage and databases. This improved my understanding of how data is handled efficiently and enhanced my skills in managing application data.

Week 6: Networking and APIs

```
1  {

4      "project_id": "blood-donation-app-a7042",
5      "storage_bucket": "blood-donation-app-a7042.firebaseioapp"
6    },
7    "client": [
8      {
9        "client_info": {
10          "mobilesdk_app_id": "1:596793580149:android:d5f7eac4ef37ed8144363c",
11          "android_client_info": {
12            "package_name": "com.blood_donation.app"
13          }
14        },
15        "oauth_client": [],
16        "api_key": [
17          {
18            "current_key": "AIzaSyDVDy62fZd7rrAi_DWkWh7gyK9Nb91T9Wo"
19          }
20        ],
21        "services": {
22          "appinvite_service": {
23            "other_platform_oauth_client": []
24          }
25        }
26      }
27    ],
28    "configuration_version": "1"
29  }
```

A blood donation app requires networking to connect users with donors and hospitals, enable real-time updates, send requests, share location data, and store information on cloud servers for accessibility and communication.

Week 7: Application Architecture

Personal reflection

I focused on application architecture for the Blood Donation App. I learned how to structure the application into different layers such as UI, logic, and data management. This improved my understanding of how components interact within the system and helped me build a more organized and maintainable application.

WEEK 8:Project planning

Task	week
Problem identification and analysis	1-2
System design	3-4
Development/coding	5-8
Testing and Debugging	9-10
Implementation	11-12
Documentation	13
Presentation	14

Personal reflection

I focused on project planning for the Blood Donation App. I learned how to organize tasks, allocate time, and set milestones using tools like a Gantt chart. This improved my ability to manage development activities effectively and ensured the project followed a clear and structured timeline.

Week 9:Devices Features and Sensors

Emergency

Personal reflection

I focused on notifications and background services in the Blood Donation App. I learned how the system sends alerts to users even when the app is not actively in use. This improved my understanding of real-time communication and background processing, enhancing user engagement and responsiveness of the application.

Week 11: Mobile Security

Personal reflection

I focused on mobile security in the Blood Donation App. I learned how to protect user data through authentication, secure storage, and access control mechanisms. This improved my understanding of application security and ensured that sensitive information is handled safely within the system.

Week 12: Testing and Debugging

Personal reflection

I focused on testing and debugging the Blood Donation App. I tested different system functions to ensure they work as expected and identified errors within the application. I also fixed bugs and improved system performance, which enhanced the reliability and stability of the application.

Personal reflection

I built and tested the release APK of my Blood Donation App, deployed it on a device, and uploaded it to GitHub, gaining skills in deployment, testing, and version control.
